

## CONCRETE SEALER / STAIN APPLICATION

There are many stains and sealers available on the market ranging from water based stain to acid based stain. We encourage you to use the products available in your local region and follow the recommended application procedures from the supplier.

Redi-Rock International strongly encourages a sealer be applied to the wall or specialty block products after installation whether or not a stain is used. The sealer prevents water from soaking into the face of the block and causing deterioration.

Some concrete sealer suppliers are as follows:

1. Non-Film Type Water Repellent  
Chemstop WB 6  
By Tamms Industries
